ACE Translator 3000 - Revolutionizes the CAD Translator market with 100 CAD/3D/EDA Translators

(San Diego, CA) – Numerical Innovations, LLC (NI) announced its release of ACE Translator 3000. ACE Translator 3000 provides over 100 translators between most common EDA, CAD, and 3D formats - all in a single intuitive environment. ACE simplifies the translation process, and the built-in viewer is user-friendly with powerful editing & repair features. ACE Translator 3000 will successfully fit into your daily workflow and files outputted from ACE are optimized to be compatible with all design systems.

“ACE 3000 gives you over 100 EDA, CAD, and 3D translators in one tool, so engineers & designers are now prepared to handle any file translation without having to rely on expensive outsourcing. ACE costs less than most single-format commercial CAD translators, and with all those built-in translators (plus viewer with editing abilities) ACE is a better overall value.” - states Simon Garrison

ACE™ bi-directionally translates a wide variety formats including: DXF (AutoCAD 2010 Compatible), DWG, GDS-II, OASIS, Gerber (RS-274X/Fire9000), ODB++, Postscript, Image files (TIFF, BMP, JPEG), Large Bitmaps (any size & resolution), IGES, STL, and more. ACE™ includes many customized repair features to handle any geometrical situation, such as: AutoJoin which instantly connects & closes open boundaries segments and eliminates overlapping polygons; Polygon De-Embedding automatically solves the polygon-inside-of-polygon problem; and much more.

“Most CAD files are drawn in tools like AutoCAD where 'zero width' lines, self-intersection, and redundancy are permitted; which cause poor results when translating to other formats. Editing & clean up of these geometries can be a time consuming, and error prone process. Fortunately, ACE includes many powerful editing & repair features to automatically handle these situations.” - mentions Simon Garrison

ACE Translator 3000 starts at \$2000 (USD) with additional licensing options for floating licenses, and is available on multiple platforms including: Windows and Linux. ACE may be purchased directly from the Numerical Innovations website and Free Tryouts are also available.

About Numerical Innovations

Numerical Innovations, LLC was founded based on the industry need for easy to use, aesthetically pleasing software tools that are clever and accurately facilitate electronic designs for manufacturing. Utilizing an advanced, proprietary C++ development platform called Universal Tool Platform (UTP) created in-house, along with their experience developing a wide variety of commercial and custom EDA tools; Numerical Innovations, LLC has been able to successfully enter the market with tools providing a common user interface (UI) model and Interoperability, which will continue to satisfy customer demand and gain the reputation of producing easy to use, high quality tools. To learn more about their products, visit www.numericalinnovations.com.
